

**Project: Sussex Downs College – New Build**

**Client: Cundall  
2008**

QTP Ltd was contacted by Cundall Johnston and Partners LLP, a multi-disciplinary engineering consultancy offering civil, structural, electrical and mechanical engineering services, to undertake a consultancy service for a new build project at Sussex Downs College.

The consultancy aimed to raise the awareness of College staff and senior managers to the effective use of information communication technology in teaching and learning and enable them to make a significant and informed input to the design of the teaching and learning environments.

Desk based research was undertaken to identify nationally the current use of ICT in teaching and learning and the impact it was having on staff and learners. Further research identified leading edge projects and technical innovations that were affecting current delivery methodologies and the changes that needed to be made to incorporate these for future delivery.

A comprehensive survey was developed and issued to all staff, the data was analysed and a report produced / presented to senior management. A number of significant findings were identified within the report and the findings were incorporated into the design discussions and planning of the new learning and teaching resource areas.

**Characteristics:**

- **Research**
- **Consultation**
- **Surveys – conceptualisation / implementation / evaluation**
- **Focus group meetings**
- **Awareness raising**
- **Innovation**
- **Report and presentation of findings**
- **Partnership working**
